CONTROL AND SHUT-OFF VALVES IN SEISMIC VERSION

200 line

200 line

RV / UV 220 SP (Ex) **RV / UV 230 SP (Ex)**

two-way, single-seated,
control (shut-off) valve

RV 222 SP (Ex) **RV 232 SP (Ex)**

two-way, single-seated,
control valve with pressure-balanced plug

Control valves **200 line** are designed for regulation and shut-off of process liquid flow, for which seismic resistance of the device is required. The valves meet the conditions of **seismic resistance** in the sense of maintaining mechanical integrity and functionality after a seismic event with a response spectrum of up to 30 m.s^{-2} in all directions, in the band 0 to 33 Hz. Thus, they meet the requirements of **seismic classification 1b of fittings for nuclear energy according to OTT 87/91** and in non-nuclear applications meet the conditions for use in earthquake-prone areas with a maximum intensity of up to 9 degrees of the international scale EMS-98, or MSK-64 (9 bal.).

Version Ex meets demands of II 1/2G IIC T6...T1 Ga/Gb acc. to ČSN EN ISO 80079-36 (9/2016) and ČSN EN 1127-1 ed.2 (1/2012). Flow characteristics, Kvs coefficients and leakage comply with international standards.

The maximal permissible operating pressures in behaviour with types of material and temperature are specified in the table on page 23 of this catalogue.

Control

hand wheel
electromechanical actuators **Auma**

Application

RV / UV 2xx SP - heating, ventilation, power generation and chemical processing industries
RV / UV 2xx SP Ex - gas and chemical industries

Process media

RV / UV 2xx SP - liquids, gases and vapours without abrasive particles
e.g. water, steam, air and other media compatible with material of the valve inner parts
RV / UV 2xx SP Ex - technical and fuel gases and inflammable liquids

To ensure a reliable regulation, the producers recommends to pipe a strainer in front of the valve into pipeline or ensure in any other way that process medium does not contain abrasive particles or impurities.

Installation

The valve can be installed in any position except position when the actuator is under the valve body. The valve is to be piped the way so that the direction of medium flow will coincide with the arrows on the body.

It is necessary to protect the actuator from excessive heat from the pipeline at medium temperatures above 150°C , e.g. by appropriately insulating the pipeline and valve and tilting the actuator from the vertical axis. When the valve is used as diverting, process medium flows through common valve port AB and split streams leave through valve ports A and B).

Detailed informations are given in the instruction for installation and service.

Packings

O-ring EPDM

Packing is designed for non-aggressive media with temperature from 0°C to 140°C. Packing excels with its reliability and long time tightness. It has ability of sealing even if the valve stem is a bit damaged. Low frictional forces enables valve to be actuated with a low-linear-force actuator. Service life of sealing rings depends on operating conditions and it is more than 400 000 cycles on average.

DRSpack® (PTFE)

DRSpack® (Direct Radial Sealing Pack) is a packing with high tightness at both low and high operating pressure values. It is the most used type of packing suitable for temperatures ranging from 0 °C to 260 °C. The pH range is from 0 to 14. The packing enables using of actuators with low linear force. The design enables an easy change of the whole packing. The average service life of DRSpack® is more than 500 000 cycles.

Graphite

This type of packing can be used for media with temperature up to 550°C and pH range: 0 to 14. Packing can be "sealed up" either by screwing the packing screw in or adding another sealing ring. In regard of intensive frictional forces, graphite packing is suitable for actuators with a sufficient linear force.

O-ring EPDM

DRSpack® (PTFE)

Graphite

Principles for plug type selection

V-ported plugs should not to be used in supercritical differential pressures with inlet pressure $p \geq 0,4$ MPa and for regulation of saturated steam. In these cases we recommend to use a perforated plug. The perforated plug should be also used always when cavitation may occur due to a high differential pressure value or valve ports erosion caused by high speed of process medium flow. If the parabolic plug is used (because of small Kvs) for supercritical differential pressures, it is necessary to close both plug and seat with a hard metal overlay, i.e. stellited trim.

Rangeability

Rangeability is the ratio of the biggest value of flow coefficient to the smallest value. In fact it is the ratio (under the same conditions) of highest regulated flow rate value to its lowest value. The lowest or minimal regulated flow rate is always higher than 0.

RV / UV 2x0 SP

Control and
Shut-off valves
in seismic version

DN 15 to 400
PN 16, 25 and 40

Control valves **RV / UV 220 SP (Ex)** and **RV / UV 230 SP (Ex)**, and **RV / UV 2x0 SP (Ex)** are single-seated valves designed for regulation and shut-off of process liquid flow.

Technical data

Packing	O - ring EPDM t _{max} =140°C, DRSpac®(PTFE) t _{max} =260°C, Exp. graphite, bellows t _{max} =500°C		
Seismic resistance	0 to 33 Hz, 30 m.s ²		

Kvs values and differential pressures Δp_{max} [MPa] of valves DN 15 - 150

Δp_{max} value is the valve max. differential pressure when open - close function is always guaranteed. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa. Otherwise it is suitable to use perforated plug (Δp up to 4,0 MPa), or sealing surfaces of seat and plug with a hard metal overlay (Δp up to 2,5 MPa).

- 1) parabolic plug
- 2) V-ported plug with linear characteristic, parabolic plug with equal-percentage, LDMspline® or parabolic characteristic
- 3) valve with micro-throttling trim. Version with Kvs 0.01 to 0.063 m³/hour is possible after agreement with the producer.

LDMspline® or parabolic characteristic from Kvs ≥ 1.0 , equal-percentage, from Kvs ≥ 0.4 . Perforated plug available only with Kvs values in shadowed frames  with the following restrictions:

- Kvs values 2.5 to 1.6 m³/hour available with linear characteristic only
- Perforated plug with Kvs value acc. to column No. 2 available with linear or parabolic characteristic only.

Max. differential pressure Δp for valves PN 16 must be 1.6 MPa
metal - version with metal - metal seat sealing

PTFE - version with metal - PTFE seat sealing (is not applicable to contoured plugs)

Max. differential pressures specified in table apply to PTFE and O-ring packing.

Δp_{max} for bellows must be consulted with the producer.

Values Δp_{max} are set for the most unfavourable pressure ratios on the valve PN 40, but in concrete cases the real Δp_{max} value can be higher than values specified in the table above.

Kvs values and differential pressures Δp_{max} [MPa] of valves DN 200 - 400 with V-ported plugs (flow direction below plug) for electromechanical actuators

Δp_{max} value is the valve max. differential pressure when open - close function is always guaranteed. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa. Otherwise it is suitable to use perforated plug (Δp up to 4,0 MPa), or sealing surfaces of seat and plug with a hard metal overlay (Δp up to 2,5 MPa).

RV 2x2 SP

Control valves,
pressure-balanced,
in seismic version

**DN 25 - 600
PN 16, 25 and 40**

Control valves **RV 212 SP (Ex)**, **RV 222 SP (Ex)** and **RV 232 SP (Ex)**, further only **RV 2x2 SP (Ex)** are single-seated valves with pressure-balanced plug designed for regulation of process liquids flow. This design of the valves allows control at high pressure drops, even at low forces of the used actuators.

Leakage rate for Ex version	RV 2xx class IV. acc. to ČSN EN 1349 (7/2010) (<0.01% Kv)	
Rangeability r	50 : 1	
Packing	O - ring EPDM t _{max} = 140 °C, DRSpac® (PTFE) t _{max} = 260 °C, Exp. graphite t _{max} = 500 °C	
Seismic resistance	0 to 33 Hz, 30 m.s ²	

Kvs values and differential pressures Δp_{max} [MPa] of valves DN 25 - 150

Δp_{max} value is the valve max. differential pressure when open - close function is always guaranteed. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa. Otherwise it is suitable to use perforated plug (Δp up to 4,0 MPa), or sealing surfaces of seat and plug with a hard metal overlay (Δp up to 2,5 MPa).

For further information on actuating, see actuators' catalogue sheets		Actuating (actuator)					Auma	Hand wheel
		Marking in valve specification No.					EA...	Rxx
		Linear force					5 kN

150		360.0	250.0	160.0	100.0	63.0	4.00	4.00

1) linear characteristic only

Valves RV 2x2 can be optionally assembled with all the actuators specified in catalogue sheet RV / UV 2x0.Max. differential pressures specified in table apply to PTFE and O-ring packing. Δp_{max} for bellows must be consulted with the producer.

Perforated plug available only with Kvs values in shadowed frames  with the following restrictions:

- Perforated plug with Kvs value acc. to column No. 2 available with linear or parabolic characteristic only
- Max. differential pressure Δp for valves PN 16 must be 1.6 MPa.

Kvs values and differential pressures Δp_{max} [MPa] of valves DN 200 - 600

Δp_{max} value is the valve max. differential pressure when open - close function is always guaranteed. In regard of service life of seat and plug, it is recommended so that permanent differential pressure would not exceed 1.6 MPa. Otherwise it is suitable to use perforated plug (Δp up to 4,0 MPa), or sealing surfaces of seat and plug with a hard metal overlay (Δp up to 2,5 MPa).

600	500	120	4000	2500	1600	1000	630	---	4.00	---

It is not possible to delivery perforated plugs for Kvs acc. to the column No.1, for Kvs acc. to the column No.2 it is possible only with linear or parabolic characteristic. For another columns without limitation.

Max. differential pressures specified in table apply to PTFE and graphite packing.

Max. differential pressure Δp for valves PN 16 (PN 25) must be 1,6 MPa (2,5 MPa).
